

Applications Platform Data Sheet

What is it?

Applications Platform is a web-based environment for developing, customising and deploying web applications which are mobile compatible. There is no hardware or software to purchase or install. Using a combination of wizards and drag-and-drop technology businesses can create entire applications with minimal coding.

How long does it take to build an application?

The step-by-step wizard and drag-and-drop method of building applications makes it significantly quicker than traditional development methods.

For example, a single object plus associated list views with view and edit record forms can be achieved in minutes, and with clicks not code. In fact, relatively simple applications can also be built purely by importing an Excel spreadsheet.

The abilities that Applications Platform offers businesses fit into four categories:

• Ground-up Applications

Build entire applications from scratch

Examples: HR solutions, time management app, channel management/franchise apps, approval and compliance systems, forums/collaboration environments

• Application Extensions

Build custom extensions for your existing business systems

Examples: work job extensions, expense management extension, asset management extension, quoting extension, returns management extension

• Library Applications

Purchase a pre-built application that can be tailored to your requirements

Examples: Custom CRM, order management, purchase order approval software, vehicle asset management software

• Web Portals

Create internal or external portals that can integrate with your website or intranet.

Examples: HR portal, purchase order processing portal, customer service portal, supplier or trading partner portal, communications portal, product returns portal.

What knowledge do I need to build applications/extensions/portals?

Applications Platform employs an easy-to-use interface and requires minimal coding. Therefore, simple applications can be created by virtually anyone by uploading a spreadsheet, XML file, access database, or drag and drop functionality within the platform. However, for more complex solutions we would recommend some knowledge of JavaScript coding.

Library applications currently available

Library applications provide ready-to-use, customisable solutions that deliver an extensive feature rich application.

 Applications Platform for Outlook Plug-in

 Codeless CRM

 Codeless Platforms Business Suite

 Order Management Application

 Purchase Order Approval

 Customer and Partner Portal Software

 Vehicle Asset Management

 Field Service Management

What security and authentication does Applications Platform provide?

Applications Platform equips businesses with multiple, flexible levels of authentication and security, allowing you to determine how users access the platform and how they are recognised.

All web pages benefit from Secure Sockets Layer (SSL) and Hypertext Transfer Protocol (HTTPS) for complete peace of mind.

Other security features include: Single Sign-On, LDAP, Password Expiration Policies and IP Whitelists, which enable the administrator to control application access with incredible precision.

Connecting to your current systems

BPA Platform can connect practically any data source via **ODBC, OLEDB, Web Services** or an extensive range of supported **3rd party APIs** through **connectors**. Just a few of the software vendors we work with include Sage, Microsoft, SAP, Infor, Epicor, Sugar, Salesforce, Magento and Mailchimp. For a more comprehensive list as well as industry specific solutions please visit our website.

What browsers and databases are supported?

Browsers – Desktop and Mobile

A native response interface ensures that a total cross-device experience is provided.

Google Chrome (Recommended)

Apple Safari (Mac)

Mozilla Firefox

Microsoft Edge

Microsoft IE 11

Safari (iOS)

Chrome (Android and iOS)

Databases

MySQL

Microsoft SQL Server

Oracle
